# Steps to Enable Browser Notifications for Corporate Search extension processes

Contents
Setup the Windows PC for Notifications

- Recommended to set the *Focus assist* to **OFF**

- Click on *Manage notifications*

o Make sure the following recommended settings are set.

Setup Web Browser EnC Notifications
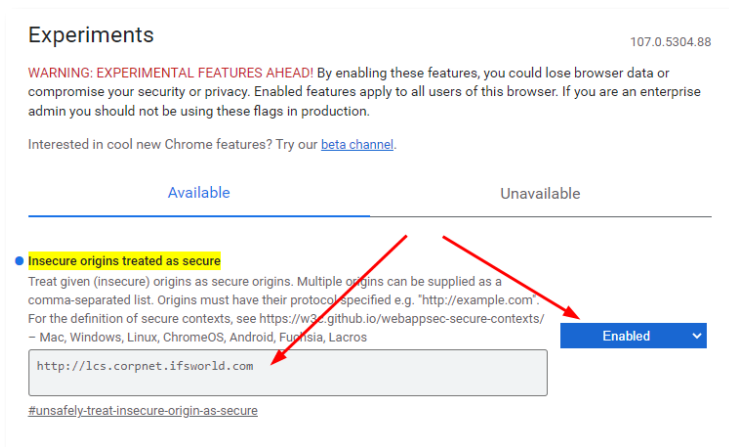

I)   Copy and paste below in browser (Chrome /Edge).

> chrome://flags/#unsafely-treat-insecure-origin-as-secure

> edge://flags/#unsafely-treat-insecure-origin-as-secure

II)   Under '*Insecure origins treated as secure*', **copy and paste the LCS web URL**, and it set to **Enabled**

> http://lcs.corpnet.ifsworld.com

Or if Autopilot users, then

> http://support.ifsworld.com

Information: This step is needs to be done because the LCS Online portal works on *http* without an SSL. Since web browsers are now blocking notifications of non-secured sites by default, this step overtakes the settings and sets the LCS Online portal as a trusted site. This allows notification permissions to be set

III)   Click on the '**Relaunch**' after the above settings. This will restart the browser.

IV)   Go to the EnC Dashboard via LCS web and **Allow** notifications.

a. **If** the site didn't ask for permissions, you might check and allow notifications manually using the below URI via the browser.

chrome://settings/content/siteDetails?site=http%3A%2F%2Flcs.corpnet.ifsworld.com

edge://settings/content/siteDetails?site=http%3A%2F%2Flcs.corpnet.ifsworld.com

Access EnC Web Portal

Recommending to access EnC web via Corporate Search new tab.

Important: Notification will not work if your EnC VIEW name was changed during the import. The view should contain the default name: **GLOBAL_ENC**
